EDUCATION

York University

Bachelor of Science Specialized Honours in Computer Science

Toronto, ON

Expected June 2028

EXPERIENCE

Full-Stack Developer (Remote Freelance) | Beyond Education Academy — Seoul, South Korea

Mar 2025 – Present

- Built a full-stack SAT, AP & IB Exam College Board test simulator using Next.js, React, and Tailwind with responsive layouts for mobile and desktop
- Integrated Supabase Auth & PostgreSQL for real-time answer syncing, timer tracking, and cross-device session resumption
- **Optimized application performance** through server-side rendering, efficient database queries, and reduced client-side bundle size, improving load times across devices

AI Automation Developer (Remote Freelance) | Paul Academy — Seoul, South Korea

Dec 2024 – Mar 2025

- Built an AI-driven exam automation tool that **reduced exam creation time by 97%** (3 hours → under 5 minutes)
- Developed a React frontend and JavaScript backend to parse PDF exams and auto-populate Google Sheets via the Drive & Sheets API
- Fine-tuned a FLAN-T5 model in Python to classify exam questions by difficulty, topic, and type, supporting text and image inputs

PROJECTS

Automated Vulnerability Assessment & Penetration Testing Pipeline | Python, Nmap, Metasploit, NVD/CIRCL APIs, ReportLab

- Built a **vulnerability scanning** pipeline using Nmap's Vulners engine, cross-referencing CVEs against NVD/CIRCL APIs for CVSS scores and remediation data
- **Automated penetration testing** by querying msfconsole for each CVE and executing matching Metasploit modules against a homelab to validate exploitability
- Generated PDF risk-assessment reports via ReportLab with risk-distribution summaries, top-5 critical CVE vector analysis, and a full CVSS-sorted vulnerability table with remediation guidance

York University Event Hub — Full-Stack Developer | React, FastAPI, Supabase (PostgreSQL), Jira, Git

- Built a centralized event platform giving students real-time access to campus & club activities, backed by a normalized PostgreSQL database
- Built a Python web scraper and Discord bot to automate event data extraction from club channels
- **Lead and collaborated in an Agile-based** team using Jira for sprint planning and Git for branching/rebasing workflows

American Sign Language Learning App (UNHack Hackathon) | React, Python, OpenCV, MediaPipe, Keras

- Built an accessible "Duolingo-style" web app to teach American Sign Language, with a React frontend connected to a Python backend
- Used MediaPipe and OpenCV for real-time hand-landmark tracking and trained a Keras model to classify signs, providing instant feedback on sign accuracy

TECHNICAL SKILLS & CERTIFICATIONS

- **Certifications:** CompTIA Security+
- **Languages:** Java, C, Python, JavaScript/TypeScript, Bash, Lua, RISC-V Assembly, SQL, Swift, Verilog
- **Frameworks, Libraries & Databases:** React.js, Next.js, Express.js, Three.js, OpenCV, MySQL, Firebase, Supabase, AWS, Azure
- **Management Platforms:** Jira, Trello, Git, Notion, Slack, Teams
- **Extracurriculars:** Teaching, Rock Climbing, Music
